Graham-Cumming, John.

The GNU make book / by John Graham-Cumming. -- 1st edition.

pages cm

Includes index.

Summary: "Covers GNU Make basics through advanced topics, including: user-defined functions, macros, and path handling; creating makefile assertions and debugging makefiles; parallelization; automatic dependency generation, rebuilding targets, and non-recursive Make; and using the GNU Make Standard Library"-- Provided by publisher.

ISBN 978-1-59327-649-2 -- ISBN 1-59327-649-4

1. GNU Emacs. 2. Text editors (Computer programs) 3. Make (Computer file) I. Title.

About the Author

John Graham-Cumming is a longtime GNU make expert. He wrote the acclaimed machine learning–based POPFile email filter and successfully petitioned the British government to apologize for its treatment of Alan Turing. He holds a doctorate in computer security from Oxford University and works at CloudFlare.

About the Technical Reviewer

Paul Smith has been the Free Software Foundation’s GNU make project maintainer since 1996. He’s been using and contributing to free software since the 1980s and to GNU/Linux since 1993. Professionally, he writes networking and database system software. Personally, he enjoys biking and scuba diving with his wife and kids.

BRIEF CONTENTS

Preface xv

Chapter 1: The Basics Revisited 1

Chapter 2: Makefile Debugging 43

Chapter 3: Building and Rebuilding 77

Chapter 4: Pitfalls and Problems 109

Chapter 5: Pushing the Envelope 161

Chapter 6: The GNU Make Standard Library 187

Index 225

CONTENTS IN DETAIL

PREFACE

xv

1

THE BASICS REVISITED

1

Getting Environment Variables into GNU make	1
Setting Variables from Outside the Makefile	3
The Environment Used by Commands	6
The \$(shell) Environment	7
Target-Specific and Pattern-Specific Variables	9
Target-Specific Variables	10
Pattern-Specific Variables	11
Version Checking	13
MAKE_VERSION	13
.FEATURES	14
Detecting \$(eval)	16
Using Boolean Values	16
Undefined Variables in Conditionals	17
Consistent Truth Values	18
Logical Operations Using Boolean Values	19
User-Defined Logical Operators	19
Built-in Logical Operators (GNU make 3.81 and Later)	20
Command Detection	21
Delayed Variable Assignment	22
Simple List Manipulation	24
User-Defined Functions	25
The Basics	26
Argument-Handling Gotchas	26
Calling Built-in Functions	27
Recent GNU make Versions: 3.81, 3.82, and 4.0	29
What's New in GNU make 3.81	29
What's New in GNU make 3.82	34
What's New in GNU make 4.0	38
What's New in GNU make 4.1	42

2

MAKEFILE DEBUGGING

43

Printing the Value of a Makefile Variable	43
Dumping Every Makefile Variable	45
Tracing Variable Values	47
Tracing Variable Use	47
How the Variable Tracer Works	48
Tracing Rule Execution	51
An Example	51
The SHELL Hack	52
An Even Smarter SHELL Hack	53
GNU make 4.0 Tracing	54

Makefile Assertions	55
assert.	55
assert_exists	56
assert_target_directory.	57
An Interactive GNU make Debugger	58
The Debugger in Action	58
Breakpoints in Patterns.	60
Breakpoints in Makefiles	61
Debugger Internals	62
Dynamic Breakpoints in the GNU make Debugger.	65
Dynamic Breakpoints in Action	65
The Easy Part	67
The Trick	68
Rocket Science	69
An Introduction to remake.	69
Just Print and Trace	69
Debugging.	72
Targets, Macro Values, and Expansion	74

3

BUILDING AND REBUILDING

77

Rebuilding When CPPFLAGS Changes	77
An Example Makefile	78
Changing Our Example Makefile	79
How Signature Works	81
Limitations	82
Rebuilding When a File's Checksum Changes	82
An Example Makefile	83
Digesting File Contents	83
The Modified Makefile.	84
The Hack in Action	85
Improving the Code.	86
Automatic Dependency Generation	86
An Example Makefile	87
makedepend and make depend	88
Automating makedepend and Removing make depend	89
Making Deleted Files Disappear from Dependencies	90
Doing Away with makedepend.	91
Using gcc -MP	92
Atomic Rules in GNU make.	92
What Not to Do	93
Using Pattern Rules	93
Using a Sentinel File	94
Painless Non-recursive make	96
A Simple Recursive Make.	97
A Flexible Non-recursive make System	98
Using the Non-recursive make System	103
What About Submodules?	104
